

Voyage of Darwin

Biology, Cimock

Working in pairs, you will search the internet for information on the “founder” of the Theory of Evolution. Answer the following questions on a separate sheet of paper, then use the attached map to complete the second part.

Charles Darwin

1. Who was he? Describe a brief biography of the man.
2. How did he ‘discover’ the theory of natural selection?
3. How did he share his results with the rest of the world? How did the world react?

Track the Voyage of the HMS Beagle!

- On the attached map, find and draw the voyage of the ship that carried Darwin around the world
- You must pick 5 of the stops that Darwin made;
 1. Label the stops and how long he stayed
 2. Describe and draw at least 2 animals/plants he studied at each stop
 - These can be on the back of the map or on a separate sheet of paper
