

History of Environmental Science Timeline

Using the notes collected from the video: PBS-Endangered Planet, create a timeline of important environmental events that change the world's (or United States) view of our natural environment.

Since the video only covers until the 1980s, you will need to research an additional 15 major environmental events that have occurred between 1980-2010 (approx. 5 per decade). The total number of events on your final timeline should have a *minimum* of 25 dates.

For the timeline....

- Date
- Person/Place/Thing
- summary of event (be concise, no more than 5 sentences!)
- Picture
