

## Body Systems Project

### House (Team Leader):

- You will be the only one asking questions and directing your “team”
- Determine the associated (major) body system linked to your disease.
  - Draw and label the appropriate parts
  - Be detailed and creative
  - Present the body system components to your colleagues

### Assistant 1 (Internist):

- In presentation format (PP or Keynote)
  - Like you are giving a lecture to other dr's
- You will explain your body system
  - describe how it works
  - Explain the pathways and functions
- If related to other systems in the body talk about those as well

### Assistant 2(Disease Specialist):

- In presentation format
- You will explain the assigned problem
  - describe how it works
  - What are the symptoms
- What happens to the body systems because of this disease
